Protect Yourself From the Flu

According to the Centers for Disease Control and Prevention (CDC), there were as many as 14,000 flu-related deaths and an estimated 170,000 hospitalizations in the last flu season.¹

FIVE REASONS TO GET THE FLU SHOT

- What you touch can hurt you. The flu virus can spread up to one day before a person has symptoms and can be transferred when people talk or touch things, such as their phones, desks or door handles.²
- You may not have symptoms, but your friends and family may not be as lucky. According to the Harvard School of Public Health, 20% to 30% of people who carry the influenza virus never experience flu-like symptoms, but they can still pass them on to others, who might not be so lucky.³
- The flu shot does not cause the flu. It takes two weeks for the antibodies that protect you against the flu to develop in the body; therefore, if you are exposed to the virus within those two weeks, you could still get the flu.
- It can save lives in more ways than one. Not only does the flu shot protect against the potentially deadly virus, a study found that adults were six times more likely to suffer a heart attack during the week after being diagnosed with the flu.⁴
- Even if you don't think you need it, you do.
 The Centers for Disease Control and Prevention (CDC) recommends that everyone over six months of age get a flu shot every year to protect themselves and others. The flu vaccination has been shown to reduce the risk of seeking medical care for the flu by 40 to 60%.⁵

What to Know for the 2022-2023 Flu Season

It is recommended to get a flu vaccine by the end of October. However, receiving a vaccine after October can still provide protection during the peak flu season.

There are three flu vaccines recommended for people 65 years or older:

- Fluzone High-Dose Quadrivalent vaccine
- Flublok Quadrivalent recombinant vaccine
- Fluad Quadrivalent adjuvanted vaccine
- 4

You can get a flu vaccine at the same time as a COVID-19 vaccine or booster shot.

The cost for the flu vaccine will vary depending on your plan and can be as low as \$0.
