

Unlock Total Cost of Care with Integrated Medical and Pharmacy Insights

35% of specialty drugs are processed through the medical benefit

A large portion of drug costs are billed under a plan's prescription benefit but without consideration of medical plan drug costs, true insights around total cost of care are missing. Combining and tackling drug costs under one umbrella sounds logical yet not easy, considering that the two benefits have drastically different claim formats, from the way unique drugs are identified to the methodologies around pricing.

A clearer picture of drug costs

Integrated Data powered by Artemetrx is an analytics software solution that integrates medical and pharmacy data that delivers key insights, including:

- ✓ Total Cost of Care
- ✓ Benchmarking
- ✓ Drug Cost per Site of Care
- ✓ Super Spenders
- ✓ Trends by Drug and Therapy
- ✓ Insightful Dashboards

Actionable data drives savings

While understanding a trend driver is critical, the opportunities to take action on them are even more so. Most of the time, it is up to the plan itself to take action on these interventions.

- ✓ Data run through 1000 protocols to find savings
- ✓ Site of care interventions
- ✓ Formulary conversion support
- ✓ Adherence programs
- ✓ Drug and dosing challenges by diagnosis

Super Spender Case Study

Integrated Data identified medical and pharmacy claims for a single Hereditary Angioedema (HAE) case with total drug plan spend of \$778,811.

- Changed prescription refill threshold at the therapy level to prevent over-utilization.
- Used member hospitalization history to support a dose reduction discussion with provider.
- Fueled health plan to renegotiate a new drug discount at their preferred specialty pharmacy.

PLAN SAVINGS FROM SUPER SPENDER INTERVENTIONS

\$343,651
